

Safety First

Keep your customers and employees safe during COVID-19

As society adjusts to the “new normal,” banks need to create an environment that is safe for all occupants, while still delivering exemplary customer service. The **Health Compliance Solution** from March Networks® delivers real-time alerts — complete with video — about site occupancy, elevated body temperatures, and compliance to health and safety policies, at all of your branches.

Three ways to help you with your commitment to socially responsible guidelines

1 Monitor and measure your branch occupancy in real-time with 99%+ accuracy

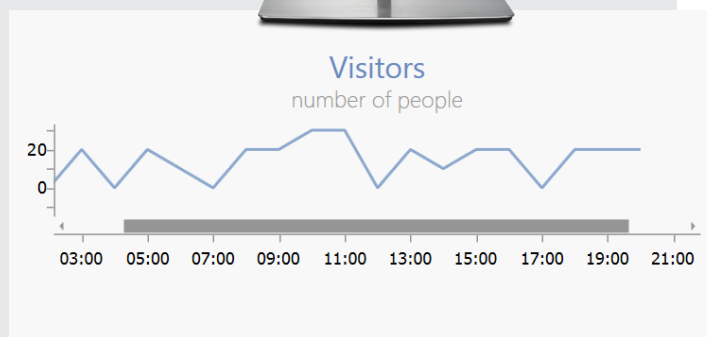

This single system alerts branch employees about occupancy levels so they can take necessary action

- Count all customers entering and exiting your branch
- Get real-time alerts when occupancy limits are getting close or have been exceeded
 - Local monitor changes color and indicates total number of current occupants (and how far over the threshold you are)
 - Local Philips Hue light illuminates to alert management and employees
 - Automated text message notifies management
 - Automated email and/or “Telegram Communicator” (free app in Apple Store and Google Play) contain pertinent information and a link to a snapshot from the branch camera
- Limit the number of employees in shared spaces, including kitchens, break rooms, and offices
- Occupancy threshold warnings help you stay ahead of the game to keep occupants safe
- Public view monitor communicates occupancy levels to customers

From headquarters...

- Monitor multiple branches simultaneously
- Color coding draws attention to issues
- Receive maximum occupancy email/SMS/“Telegram” App push notifications/alerts
- Review historical compliance via March Networks Searchlight™ occupancy dashboards
- Identify and focus on problem branches

2 Be alerted when an occupant has an elevated body temperature

Integrate leading third-party thermal cameras to monitor the body temperatures of everyone entering the branch, and get real-time alerts on elevated temperatures

- Automated text message notifies management
- Automated email and/or “Telegram Communicator” contain pertinent information and a link to a snapshot of the incident from the bank’s camera
- List alerts across all branches
- Filter by branch or camera
- Identify high-risk sites

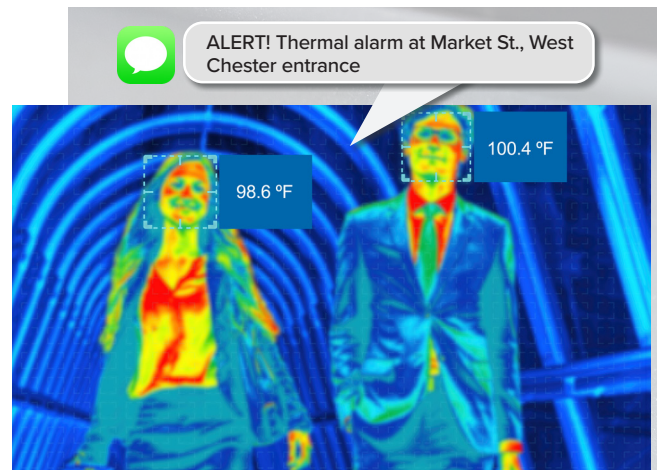

3 Enforce health, safety and operations initiatives that have been established in the new normal

Review lists of events and transactions — complete with video — that are important to you.

- Be aware of how many customers are in the queue, along with their wait times
- Visually verify contactless interaction between employees and customers
- Receive daily emails listing all instances of exceptions; these emails include a link to the details and video for each instance

Review snapshots from the cameras at your sites to see what’s happening at each branch.

- Discern safety issues like whether employees are masked, Plexiglass barriers are in place, and social distancing markers are clearly visible
- Verify all emergency exits and escape routes are unimpeded and functional

In order to enhance accuracy, thermal cameras must be deployed according to specific conditions and processes

The solution that's custom-built for COVID-19 compliance

Every aspect of this portfolio has been specifically designed to help banks keep employees and customers safe, and follow government safety guidelines.

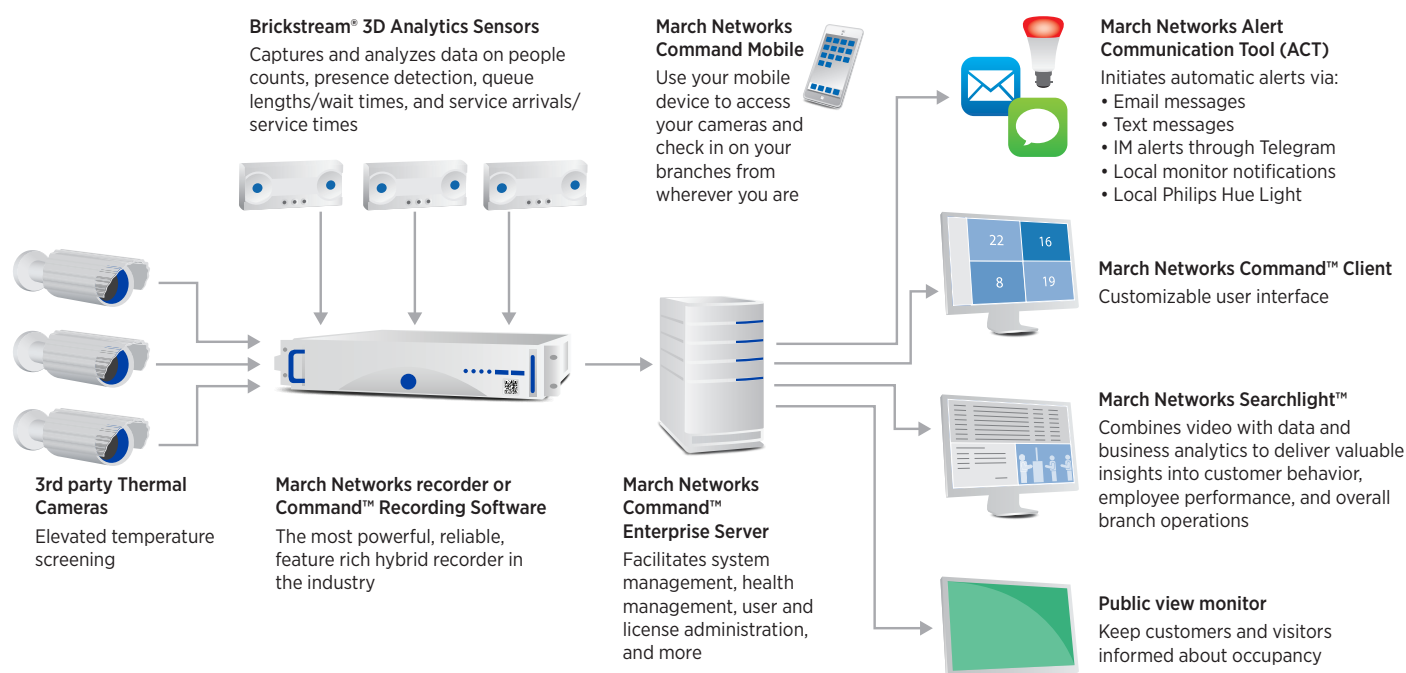

Configurable, scalable, and flexible as environments change

Based on local guidelines, your requirements will vary from branch to branch, and those requirements will change as COVID-19 stipulations progress from one phase to the next. This solution is designed to fit your operational needs today, and evolve as those needs change.

Add on analytics cameras!

The [ME6 Series cameras](#) from March Networks feature a set of AI-powered video analytics to help your bank adhere to current policies like:

- Wrong direction detection in instances where traffic patterns are expected to flow in a certain direction
- Intrusion detection for branches that are restricting the general public from entering specific areas or zones.
- Direction detection for cases where management wants to be notified when someone crosses a virtual line
