

March Networks Command GE Plug-In

An advanced bi-directional integration module for superior video and access control system management.

FEATURES

- Support for March Networks Command Enterprise and Command Professional
- Comprehensive alarm event video searching, viewing and exporting
- Rapid visual identification of incidents
- Pan/tilt/zoom preset trigger
- Local video pop-ups
- March Networks DecodeStation VX video wall video pop-ups
- SMTP email notification
- Ability to start/stop video recording
- Alarm activation and deactivation
- Two-way audio

PART NUMBER

- 27219

The March Networks® Command™ GE Plug-In offers a superior solution for the integration and management of IP-based digital video and access control systems. The plug-in allows both alarms and events from the General Electric (GE) Facility Commander WNX or Secure Perfect to be seen by, and sent from, March Networks Command video management software. The result is a tightly integrated access control and video management system that enables faster incident response times and better risk mitigation for a stronger overall security solution.

With the Command GE Plug-In integration module, any GE event can initiate a wide range of actions within any Command video management system. Typical use scenarios include triggering recording on a Command Recording Server, displaying live video pop-ups from alarm-associated cameras, moving PTZ cameras to preset locations, or sending notification emails. All GE events appear within the system alarm logs and can be searched and viewed when playing back recorded video in client applications such as March Networks SiteManager.

March Networks Command GE Plug-In

GE SYSTEM SOFTWARE REQUIREMENTS

Any GE system using GE's ISPAPI version 6.1 API. e.g. GE Facility Commander WNX version 7 (service pack 2) or GE Secure Perfect V6 (eZ, Professional Enterprise or Global editions). A GE API Connectivity License is also typically required.

MARCH NETWORKS SYSTEM SOFTWARE REQUIREMENTS

March Networks GE Plug-In; March Networks Command (Enterprise or Professional).

The March Networks GE Plug-In should not be run on the same server as any March Networks Command Recording Server.

INTEGRATION SERVER SPECIFICATION

PC requirements for the GE system do vary depending on the size of the access control system being used. Refer to GE documentation for advice on machine specifications.

The March Networks GE Plug-In can be installed on the same PC running GE software or on any other networked PC.

SUPPORTED OPERATING SYSTEMS

- Microsoft Windows 2003 Server Enterprise 32 bit, SP2 or later
- Microsoft Windows Server 2008 32 bit
- Microsoft Windows Server 2008 64 bit
- Microsoft Windows XP

Developed for the quick and easy configuration of GE events, the plug-in supports GE features including:

- Digital inputs
- Zone event
- Access zone state change
- Intercom system event
- Duress event
- Door open too long
- Door status
- Operator event
- Badge event
- Badge error
- Badge trace
- Security breach
- Tampering
- Wrong PIN

Any of the above GE events can trigger any of the following actions within the March Networks IP video management system:

- Move PTZ camera to preset
- Display local video pop-ups
- Display DecodeStation VX video wall video pop-ups
- Initiate SMTP email notification
- Start/stop video recording
- Activate/deactivate on alarm on site maps
- Start two-way audio at the source of the event
- Trigger relay outputs, i.e. open door, turn on lights or open guard gates

NOTE: English language support only.
