

Intelligent Video Surveillance for Education

**For enhanced safety and security at K-12 schools,
colleges and other educational institutions**

Keeping students and staff safe is your top priority. Our intelligent IP video solution can help by providing reliable, high-quality surveillance coverage across your entire campus or school board. March Networks® megapixel cameras and network video recorders deliver sharp, detailed images and video evidence, giving you a clear view of what's taking place at entryways and exits, in hallways and classrooms, and other indoor and outdoor facilities.

User-friendly video management

Our powerful March Networks Command™ video management software is easy to use and install, with a customizable user interface so principals, VPs, IT and other authorized staff see only the information they need to do their job. The software also lets you manage your entire video network securely from any remote location, saving you travel time and giving you instant access to video when you need it.

Mitigate risk and liability

Theft, vandalism and false liability claims can consume your time and resources. Protect your facilities with our extensive portfolio of surveillance cameras. Get real-time and recorded video with our megapixel cameras, or keep your existing analog cameras and transition to network video at your own pace with our hybrid NVRs.

Remote video access

Providing law enforcement with remote access to live video is crucial during a school emergency. Our March Networks Command Mobile solution provides secure access to your video via smartphones, tablets and laptops so first responders get the real-time information they need to react and resolve incidents quickly.

Find out why K-12 school districts and colleges are using March Networks solutions to better protect their students, staff and facilities.
