

March Networks Web Client

Web-Based User Interface

From small standalone facilities to global enterprise applications, March Networks® **Web Client** provides all the features users count on to make their jobs easier and more intuitive. The sleek, modern interface — complete with breadcrumb navigation — helps you monitor video, audio and data in real-time. Plus, it exponentially reduces the time you spend on post-incident investigations. The user interface can be tailored based on job responsibility, and the customizable landing page allows users to jump right into their daily routine, with almost no on-the-job training required.

Web Client runs remotely on any device, including laptops, PCs and tablets, and because it is updated via March Networks **Command Enterprise Software**, page each workstation will always be running the latest software version.

Users whose applications do not support thick clients will be able to install Web Client without having to run a virtual machine.

Key Benefits

- ▼ **Web-based.** The user interface runs in a web browser, so users can access the application from any computer connected to the internet instead of using an application that has been installed on the user's computer.
- ▼ **Customizable user interface based on job responsibility.** Each user sees only what's needed to perform their job, in the language of preference, dramatically reducing the learning curve and training requirements. Additionally, users can customize the system navigation using Personal folders.
- ▼ **Customizable landing page.** Each time they log onto the system, users can pick back up where they left off; their same cameras of preference will be displayed at log-in.
- ▼ **Breadcrumb navigation.** This effective visual aid helps users determine where they are within the hierarchy of the system, logical, and personal folders.
- ▼ **Multiple viewing options.** View video from a single camera, or from multiple cameras in flexible grids. Play live and archived video side-by-side. Simultaneously display multiple views from the same camera for comparison. Playback synchronized audio and video.
- ▼ **Perform different tasks on separate monitors.** Undock workspace or dashboard tabs and "float" them to any other monitor connected to your computer.
- ▼ **Intuitive search tools.** Search for recorded video evidence using your search method of preference, including timeline, thumbnails, motion histograms, and smart search (search for motion in specified areas of recorded video).
- ▼ **Save on bandwidth.** Video goes directly from the recorder to the client (as opposed to through a server), which saves on bandwidth.

*View live video, and analyze and export recorded video
via a web-based user interface.*

When it comes to speed of investigation...you'll win!

Post-incident investigations can consume a significant portion of your work day. March Networks Web Client gives you focused tools to help you rapidly gather and retrieve evidence. Hours spent searching through video archives can be reduced to minutes, so you can find what you're looking for.

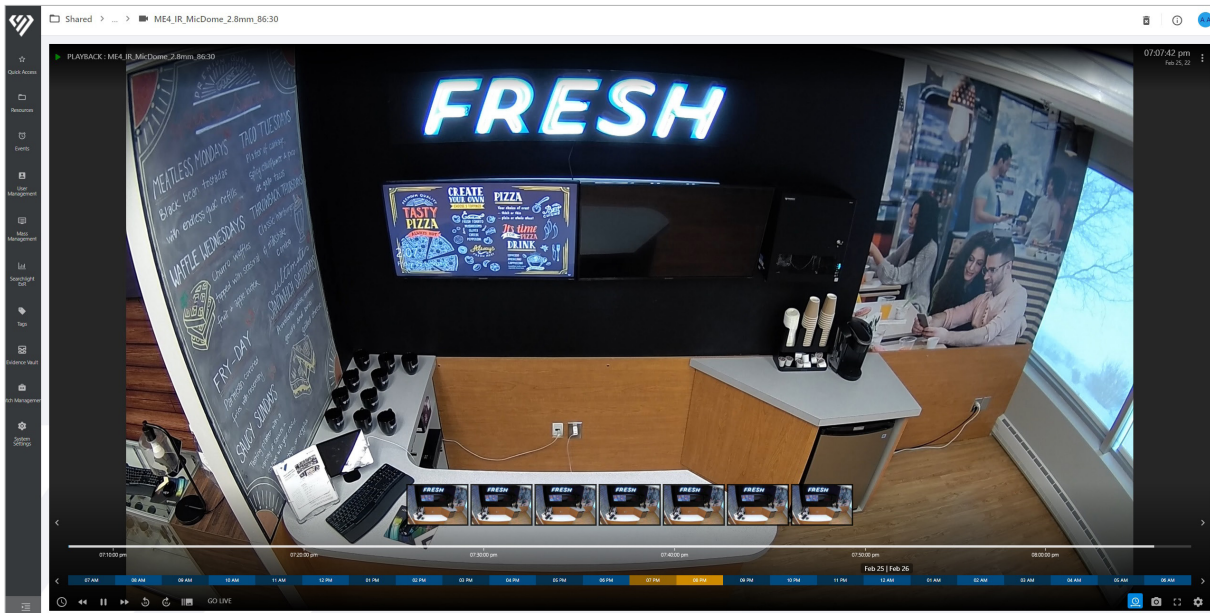

Time-saving search tools

Move quickly from months to minutes in your recorded video, and zero in on the exact timeframe you want to investigate, using these valuable tools.

- Search by time and date
- Search using motion histograms
- Thumbnail search
- Play video forward or backward in increments of 1x, 2x, 4x, 8x, or 16x normal speed
- Advance or reverse video in 30 second increments
- Jump to live video

Languages supported include:

- German
- English
- Spanish
- Finnish
- French
- Italian
- Korean
- Portuguese
- Turkish
- Vietnamese
- Chinese (Traditional)
- Chinese (Simplified)

Export Your Evidence

Once your case file is complete, you can export your evidence to a .pdf, CD, DVD, file system of the PC, or the USB port of a recorder. Evidence can also be queued on recorders for local USB export; evidence can be automatically added to the queue based on the recorder's configuration, or queued up manually from a remote site.
