AI Series Smart Cameras

Immerse yourself in analytics and enhance your security with our new smart cameras. March Networks' AI Series Cameras, led by the AI4 camera, deliver unmatched precision and reliability, redefining the standard for accuracy in threat identification, where false positives are effectively eliminated.

Our advanced technology uses AI analytics to ensure every alert you receive is credible, allowing you to respond with confidence. Our system's unparalleled flexibility allows you to deploy up to five analytic triggers simultaneously, offering a comprehensive security solution tailored to your unique needs.

From intrusion and loitering detection to line crossing, unattended or missing object detection, face detection, and crowd detection, our solution is designed to enhance your surveillance capabilities, ensuring peace of mind and security across all aspects of your operation. **Embrace the future of intelligent video with the AI Series Cameras, where innovative technology meets practical, scenario-specific solutions.**

Face detection an alarm is triggered when a face is fully visible.

Crowd detection an alarm is triggered when a preconfigured number of people are detected in a defined area.

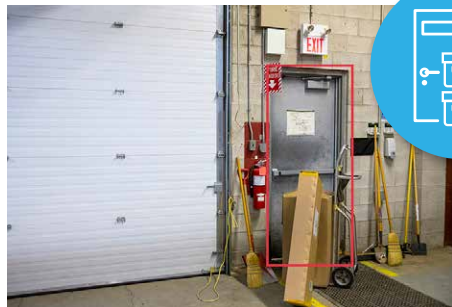

Intrusion detection detects and triggers an alarm the moment a person or vehicle enters a defined zone.

Object removal triggers an alarm if an object is removed from a user-defined zone.

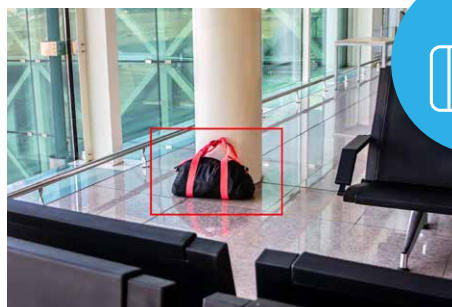

Tripwire alarm sets off an alarm when people or vehicles cross a virtual line.

Blocked exit detection helps businesses stay compliant with fire and safety regulations by sending real-time notifications when exit pathways are blocked.

Stopped vehicle sends visual alerts in real time about customers arriving for curbside pick-up or about vehicles parked in a sensitive prohibited area.

Abandoned object detects objects placed within a defined zone and triggers an alarm if the object remains in the zone longer than the user-defined time allows.

Loitering detection notifies suspicious behavior around ATMs, stairwells, and school grounds. Identifies when people or vehicles remain in a defined zone longer than the user-defined time allows.

KEY FEATURES

AI4 Cameras

Superior Image Quality

Next-generation sensors ensure unparalleled picture clarity day and night, in any weather condition, setting a new standard for video surveillance.

Accurate Edge Analytics

With up to five types of analytic triggers available simultaneously, the AI Series offers comprehensive security tailored to specific needs.

Cost-Effective Solution

Unlike competitors, March Networks includes analytics functionality with the AI4 cameras, eliminating the need for additional licensing.

Enhanced by Searchlight Cloud

Optimized for integration with March Networks' Searchlight Cloud, the AI4 helps speed up incident verification and enriches user data, streamlining security operations.

AI4 IR Dome

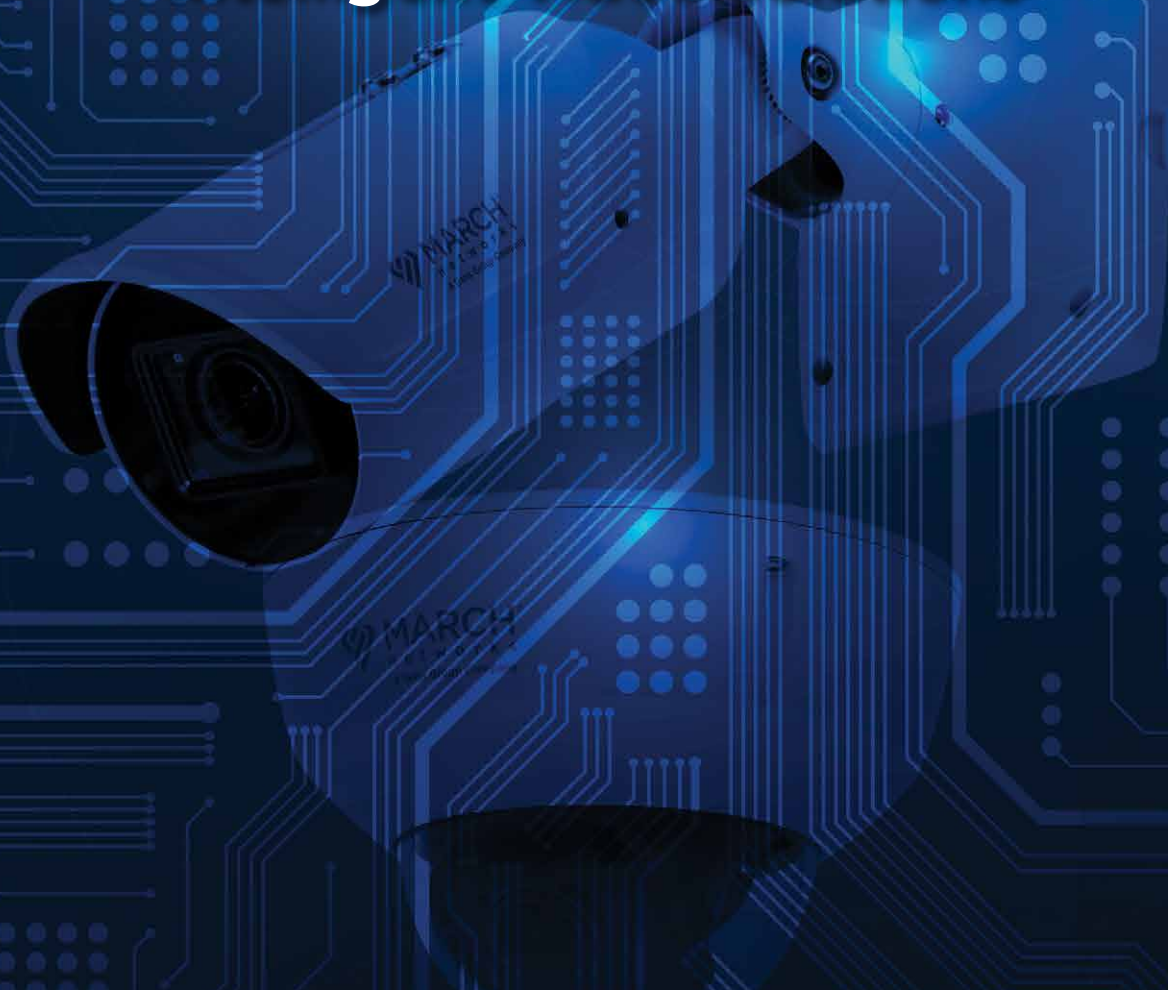

AI4 IR DuraBullet

AI Series Cameras are Profile S, G, and T certified from ONVIF, and are capable of video streaming and configuration, edge storage and retrieval, and H.265 video compression.
